

Retail Sales Analysis for Business Intelligence

Retail Sales Performance Dashboard

Interactive Business Intelligence Report (2014–2017)

Project Overview

Developed an interactive Power BI dashboard to analyze retail sales data from 2014 to 2017. The dashboard visualizes key business metrics, tracks sales trends, compares regional performance, and enables data-driven decision-making through dynamic reports and interactive filters.

Project Objectives

- Monitor sales performance using KPIs.
- Analyze country and product performance.
- Track monthly and quarterly growth.
- Support business decision-making with interactive dashboards.

Features

- Interactive Filters
- KPI Cards
- Trend Analysis

Q: Overall Sales Performance Dashboard

Objective: Analyze Total Revenue, Total Cost and Gross Profit using key business KPIs.

Q: Revenue Analysis by Product & Time

Choose Country

Country

All

▼

Choose Year

Year

Units Sold by Country

Total Transactions by Country

Gross Profit by Country

Q: Category Performance Analysis

Sum of Total Revenue by CategoryName

Sum of Units by CategoryName

Revenue per Unit by CategoryName

Total Gross Profit by CategoryName

Q: Price Range Performance Analysis

Sum of Total Revenue by Price Range

Sum of Units by Price Range

Revenue per Unit by Price Range

Sum of Gross Profit by Price Range

Project Conclusion

The Retail Sales Analysis Dashboard was developed in Power BI to transform raw sales data into meaningful business insights. The dashboard provides a clear overview of key performance indicators, including Total Revenue, Gross Profit, Revenue Discount, Monthly (MoM) and Quarterly (Q o Q) Growth, Product Performance, Country-wise Sales, and Sales Representative Performance.

Interactive filters and dynamic visualizations allow users to explore sales data across different years and countries, making it easy to identify trends, compare performance, and evaluate business growth. This project demonstrates practical skills in data cleaning, data modeling, DAX, KPI creation, and dashboard design, enabling faster reporting and data-driven decision-making.

Key Insights

- Analyzed retail sales performance across multiple years to identify business trends.
- Built interactive dashboards to compare revenue, profit, and sales growth over time.
- Identified top-performing countries, products, and sales representatives using dynamic visuals.
- Used Month-over-Month (MoM) and Quarter-over-Quarter (QoQ) analysis to track business growth and seasonality.
- Enabled users to filter data by year and country for faster and more detailed analysis.

Business Value

- Monitored overall sales performance using real-time KPIs.
- Helped identify high-performing products and sales representatives.
- Improved visibility into revenue, profit, and discount trends.
- Supported strategic business decisions through interactive data visualization.
- Reduced manual reporting by providing a centralized analytical dashboard.
